**5 of 5 Hard core performance, light weight price.** August 04, 2007

**bmontford** from Springfield, MO

This kicks the heck out of most other cards I've auditioned, and this also makes the third Turtle Beach card I've owned. Not sure I'll even buy another brand. You'd have to actually try it against something else to hear what I'm trying to tell you, so I won't even bother. Let's just say "superior". It's an enthusiast's card, for certain. It still outperforms most everything so badly it's not funny. Buy one, listen, and hear for yourself. (One odd note: I managed to burn the card trying to install it. First time something like that's ever happened in 15 years of working on PCs. Half of one of the gold contacts on the cards edge is completely burned off and the fiberglass is scorched! It still works, flawlessly... I'm not so sure about the PCI slot it was plugged into at the time, but the card is sure as heck doing it's job.)

**5 of 5 Turtle Beach for some of the best sound your PC** September 01, 2007

**tippin** from Nashville, KY

Turtle Beach has always offered an excellent performance to value ratio. I've personally found their products to be more stable than that offered by their competitors. This is the third card I've bought from them, and all of them are still used daily. This card is well suited for all uses. Music, home theater, gaming, and most other consumer uses. Pretty much what you really get in the box is an exceptionally performing sound card for a very respectable price. Buy one, its possible you might not bother buying anything else.
